Corporate Overview

Zentere provides a full range of IT, training development, and web-based solutions, to federal, commercial and not-for-profit organizations.

Since 2003, Zentere has provided project support and team lead services, and based on our substantial business and technology experience, has assisted clients in developing their overall strategy and/or business case for a wide variety of initiatives and programs.

As organizations today strive to utilize technology to support their audiences and stakeholders, they must constantly evaluate their existing systems and assets vs. the myriad of tools and technologies on the market. Because Zentere is tool and technology agnostic and can often customize off-the-shelf tools to fit organization-specific requirements, we excel at helping our clients make the most informed and intelligent choices.

Sample Projects

IT Solutions

- * The Federal Aviation Cost Accounting System Project:
Provide system design, development and enhancement support on various interfaces between the FAA's core financial systems, which include the Oracle Financials Accounting system, People Soft Cost Accounting System and various other FAA legacy systems.
- * Assist in establishing and the implementation of reimbursable agreements at the FAA.
- * Provide production support and data analysis services on several FAA core financial systems using an Oracle Database.
- * Converted the Oracle Client Server application to Oracle Web Based application.
- * Developed web service interfaces between FAA, FPDS-NG and CCR systems
- * Converted the Budget Execution Module form Citrix environment to web based application.
- * Supported the implementation of a Cost Accounting System at the FAA.

Training Solutions

- * Developed a highly interactive glass cockpit simulation to orient potential new pilots/customers to the target aircrafts technology.
- * Updated paper-based medical services training content and converted the program to a self-paced e-learning format. The new program included various online tools to support the learning process, as well as a number of online value-add features that increased member's ongoing use of the associations services.
- * Redesigned the classroom-based training for a medical staff certification program, changing the delivery from a lecture driven approach to a hands on, knowledge application-based event. The redesigned 2-day course included group exercises, games, and a variety of engaging delivery strategies.

Web Solutions

- * Provide Web application support activities and designed and developed an event management system, using Microsoft .NET technologies, for Arlington County, Virginia.
- * Provide website re-design with custom content management solution for the Sixth and I using Microsoft .NET technologies and Macromedia flash.
- * Developed content management solution for Stararbs using PHP/ Joomla and MySQL.
- * Developed a web based Project management tool.
